No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 259

NUMBER 1, NOVEMBER 15, 1987

INVITED PAPER

Multimodal Action of Antitumor Agents on DNA: The Ellipticine Series
Christian Auclair 1

COMMUNICATION

Vitamin E Remains the Major Lipid-Soluble, Chain-Breaking Antioxidant in Human Plasma even in Individuals Suffering Severe Vitamin E Deficiency
K. U. Ingold, A. C. Webb, Donna Witter, G. W. Burton, T. A. Metcalfe, and D. P. R. Muller 224

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

Cytotoxicity of the Redox Cycling Compound Diquat in Isolated Hepatocytes: Involvement of Hydrogen Peroxide and Transition Metals
Martha S. Sandy, Peter Moldeus, David Ross, and Martyn T. Smith 29

Effect of Orally Administered Secondary Autoxidation Products of Linoleic Acid on Carbohydrate Metabolism in Rat Liver *Hitoshi Ashida, Kazuki Kanazawa, Shinsuke Minamoto, Gen-Ichi Danno, and Masato Natake* 114

Photoreduction of Q_A, Q_B, and Cytochrome *b*-559 in an Oxygen-Evolving Photosystem II Preparation from the Thermophilic Cyanobacterium *Synechococcus* sp. *Akihiko Yamagishi and David C. Fork* 124

ENZYME MECHANISMS AND METABOLISM AND COENZYMES

Oxalic Acid Biosynthesis and Oxalacetate Acetylhydrolase Activity in *Streptomyces cattleya* *David R. Houck and Edward Inamine* 58

The Kinetic Mechanism of Yeast Inorganic Pyrophosphatase
Robert J. Barry and Debra Dunaway-Mariano 196

GLYCOPROTEINS AND GLYCOLIPIDS

A Chemical Method for the Deglycosylation of Proteins
Hakimuddin T. Sojar and Om P. Bahl 52

LIPIDS AND PROSTAGLANDINS

Phosphatidylcholine Synthesis in Castor Bean Endosperm: The Localization and Control of CTP:Choline-phosphate Cytidylyltransferase Activity
Anthony J. Kinney and Thomas S. Moore, Jr. 15

Homologous Regulation of Prostaglandin E_2 Receptors in Rat Renal Medulla
Catherine Limas and Constantinos J. Limas 89

MEMBRANE TRANSPORT AND INTRACELLULAR SIGNALS

Further Observations on the Effect of Calcium Ionophores on Ascites Tumor Cells
Gabriella Calviello, Donatella Bossi, and Achille Cittadini 38

Protein Kinase C Inhibition by Sphingoid Long-Chain Bases: Effects on Secretion in Human Neutrophils
Emily Wilson, William G. Rice, Joseph M. Kinkade, Jr., Alfred H. Merrill, Jr., Roland R. Arnold, and J. David Lambeth 204

MEMBRANES, CELL SURFACES, AND RECEPTORS

The Topology of Phosphogluconate Dehydrogenases in Rat Liver Microsomes
Clark Bublitz, Cheryl A. Lawler, and Shirley Steavenson 22

Lipid Peroxidation Is Not the Cause of Lysis of Human Erythrocytes Exposed to Inorganic or Methylmercury
Hisatsugu Ichikawa, Kasia Ronowicz, Mark Hicks, and Janusz M. Gebicki 46

MOLECULAR BIOLOGY, GENE EXPRESSION, AND DEVELOPMENTAL BIOCHEMISTRY

Thyroxine Elicits Divergent Changes in mRNA Levels for Two Urea Cycle Enzymes and One Gluconeogenic Enzyme in Tadpole Liver
Sidney M. Morris, Jr. 144

Interaction of the 4 S Polycyclic Aromatic Hydrocarbon-Binding Protein with the Cytochrome *P*-450c Gene *William H. Houser, Chester K. Cunningham, Ronald N. Hines, Warren I. Schaeffer, and Edward Bresnick* 215

OXYGENASES, MICROSOMES, AND *P*-450 REACTIONS

Synthesis and Aryl Hydrocarbon Receptor Binding Properties of Radiolabeled Polychlorinated Dibenzofuran Congeners *K. Farrell, L. Safe, and S. Safe* 185

PLANT MOLECULAR BIOLOGY, BIOCHEMISTRY, AND PHOTOSYNTHESIS

Purification of Phospholipase D from Citrus Callus Tissue
Wolfgang Witt, George Yelenosky, and Richard T. Mayer 164

PROTEIN STRUCTURE AND FUNCTION

Isolation, Molecular and Biological Properties of a Lectin from Rice Embryo: Relationship with Wheat Germ Agglutinin Properties
Florence Tabary, Jacqueline Font, and Roland Bourrillon 79

Isolation and Partial Amino Acid Sequence of Three Subunit Species of Porcine Spleen Ferritin: Evidence of Multiple H Subunits *James F. Collawn, Jr., Linda K. Gowan, Hal Crow, Christian Schwabe, and Wayne W. Fish* 105

PROTEIN TURNOVER, PROTEOLYSIS, AND POST-TRANSLATIONAL PROCESSING

Purification and Partial Characterization of Elastase Activity from Rat Alveolar and Peritoneal Macrophages *Concetta Gardi and Giuseppe Lungarella* 98

Rat Brain Cathepsin L: Characterization and Differentiation from Cathepsin B Utilizing Opioid Peptides *N. Marks and M. J. Berg* 131

REGULATION OF METABOLISM AND OF ENZYME ACTION

Hormonal Regulation of L-Type Pyruvate Kinase in Rat Liver Cells in Culture
Bonnie C. Miller and Gene L. Cottam 66

Metabolism of *S*-3-Hydroxybutyrate in the Perfused Rat Liver
Beth C. Lincoln, Christine Des Rosiers, and Henri Brunengraber 149

An Immediate and Steep Increase in ATP Concentration in Response to Reduced Turgor Pressure in *Escherichia coli* B
Takuji Ohwada and Shonosuke Sagisaka 157

Relationship among Activation of the Na^+/H^+ Antiporter, Ornithine Decarboxylase Induction, and DNA Synthesis *Yoshimi Kakinuma, Yoshiharu Sakamaki, Kiyoshi Ito, Edward J. Cragoe, Jr., and Kazuei Igarashi* 171

Mode of Inhibition of Brain Na^+,K^+-ATPase by Agelasidines and Agelasines from a Sea Sponge *Masaki Kobayashi, Hideshi Nakamura, Houming Wu, Jun'ichi Kobayashi, and Yasushi Ohizumi* 179

NUMBER 2, DECEMBER 1987

COMMUNICATIONS

The Inhibition Site of MPP^+, the Neurotoxic Bioactivation Product of 1-Methyl-4-phenyl-1,2,3,6-tetrahydropyridine Is near the Q-Binding Site of NADH Dehydrogenase *Rona R. Ramsay, Andrzej T. Kowal, Michael K. Johnson, James I. Salach, and Thomas P. Singer* 645

The Halobacterial H^+-Translocating ATP Synthase Relates to the Eukaryotic Anion-Sensitive H^+-ATPase *Yasuo Mukohata, Kunio Ihara, Masasuke Yoshida, Jin Konishi, Yasuo Sugiyama, and Manabu Yoshida* 650

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

Quinone Toxicity in Hepatocytes: Studies on Mitochondrial Ca^{2+} Release Induced by Benzoquinone Derivatives *Gregory A. Moore, Luisa Rossi, Pierluigi Nicotera, Sten Orrenius, and Peter J. O'Brien* 283

Interactions between Metals, Ligands, and Oxygen in the Autoxidation of 6-Hydroxydopamine: Mechanisms by which Metal Chelation Enhances Inhibition by Superoxide Dismutase *Brian Bandy and Allan J. Davison* 305

Energy-Linked Nicotinamide Nucleotide Transhydrogenase: Hydrodynamic Properties and Active Form of Purified and Membrane-Bound Mitochondrial Transhydrogenase from Beef Heart
Bengt Persson, Gunnar Ahnström, and Jan Rydström 341

Delayed, Ferrous Iron-Dependent Peroxidation of Rat Liver Microsomes
J. Graham Goddard and George D. Sweeney 372

Hydroperoxide-Induced Damage to Alveolar Macrophage Function and Membrane Integrity: Alterations in Intracellular-Free Ca^{2+} and Membrane Potential *Henry Jay Forman, Raymond J. Dorio, and Dianne C. Skelton* 457

Decomposition of Hydroxylamine by Hemoglobin
Dennis A. Bazylinski, Robert A. Arkowitz, and Thomas C. Hollocher 520

Evidence for Succinate Production by Reduction of Fumarate during Hypoxia in Isolated Adult Rat Heart Cells
Charlene Hohl, Ralf Oestreich, P. Rösen, Rudolf Wiesner, and Manfred Grieshaber 527

Radical-Driven Fenton Reactions: Studies with Paraquat, Adriamycin, and Anthraquinone 6-Sulfonate and Citrate, ATP, ADP, and Pyrophosphate Iron Chelates *Glenn F. Vile, Christine C. Winterbourn, and Harry C. Sutton* 616

ENZYME MECHANISMS AND METABOLISM AND COENZYMES

NAD^+-Dependent Retinol Dehydrogenase in Liver Microsomes *Maria Anna Leo, Cho-il Kim, and Charles S. Lieber. With the Technical Assistance of Nancy Lowe.* 241

Kinetic Mechanism of Native *Escherichia coli* Aspartate Transcarbamylase *Yuchiong Hsuanyu and Frederick C. Wedler* 316

A Molybdopterin-Free Form of Xanthine Oxidase *Susan Gardlik, Michael J. Barber, and K. V. Rajagopalan* 363

Lack of Biological Activity of Physiological Metabolites of all-*trans*-Retinoic Acid on Vaginal Epithelial Differentiation *David P. Silva, Jr., Charles R. Valliere, and Hector F. DeLuca* 391

Phosphorylase-Mediated Mobilization of the Amino Group of Adenine in *Bacillus cereus* *Umberto Mura, Dario Di Martino, Carlo Leporini, Stefania Gini, Marcella Camici, and Pier Luigi Ipata* 466

Bovine Liver Dihydropyrimidine Amidohydrolase: pH Dependencies of the Steady-State Kinetic and Proton Relaxation Rate Properties of the Mn(II)-Containing Enzyme *Myoung Hee Lee, Donald W. Pettigrew, Eugene G. Sander, and Thomas Nowak* 597

GLYCOPROTEINS AND GLYCOLIPIDS

Induction of Glycoprotein Biosynthesis in Activated B Lymphocytes *Jeffrey S. Rush, E. Charles Snow, and Charles J. Waechter* 567

Identity of the Activator Proteins for the Enzymatic Hydrolysis of Sulfatide, Ganglioside G_{M1}, and Globotriaosylceramide *A. Vogel, W. Fürst, M. A. Abo-Hashish, M. Lee-Vaupel, E. Conzelmann, and K. Sandhoff* 627

LIPIDS AND PROSTAGLANDINS

Very Long Chain Fatty Acid β-Oxidation by Rat Liver Mitochondria and Peroxisomes *Harmeet Singh, Nicholas Derwas, and Alf Poulos* 382

Metabolism of Exogenous Long-Chain Fatty Acids by Spinach Leaves *P. Grattan Roughan, Guy A. Thompson, Jr., and Sung Ho Cho* 481

Conversion of Leukotriene A_4 to Leukotriene B_4: Catalysis by Human Liver Microsomes under Anaerobic Conditions *Josef Gut, Daniel W. Goldman, Gene C. Jamieson, and James R. Trudell* 497

Metabolism of the Plant Sulfolipid—Sulfoquinovosyldiacylglycerol: Degradation in Animal Tissues *Sita D. Gupta and P. S. Sastry* 510

I. Specificity of the Glutathione *S*-Transferases in the Conversion of Leukotriene A_4 to Leukotriene C_4 *Mei Chang, M. K. Rao, P. Reddanna, C. H. Li, Chen-Pei D. Tu, E. J. Corey, and C. C. Reddy* 536

II. Isozyme Specificity of Rat Liver Glutathione *S*-Transferases in the Formation of $PGF_{2\alpha}$ and PGE_2 from PGH_2 *Mei Chang, Yang Hong, John R. Burgess, C.-P. D. Tu, and C. Channa Reddy* 548

Characterization of the *Saccharomyces cerevisiae cis*-Prenyltransferase Required for Dolichyl Phosphate Biosynthesis *W. Lee Adair, Jr., and Nancy Cafmeyer* 589

MEMBRANES, CELL SURFACES, AND RECEPTORS

Isolation of a Major Human Placental Substrate for the Epidermal Growth Factor (Urogastrone) Receptor Kinase: Immunological Cross-Reactivity with Transducin and Sequence Homology with Lipocortin
K. A. Valentine-Braun, M. D. Hollenberg, Elaine Fraser, and J. K. Northup 262

Epidermal Growth Factor Receptor Tyrosine Kinase Phosphorylation of Glucose-6-phosphate Dehydrogenase *in Vitro*
Mary A. Napier, Michael T. Lipari, Robert G. Courter, and Christopher H. K. Cheng 296

G-Protein Distribution in Canine Cardiac Sarcoplasmic Reticulum and Sarcolemma: Comparison to Rabbit Skeletal Muscle Membranes and to Brain and Erythrocyte G-Proteins
Nancy M. Scherer, Maria-José Toro, Mark L. Entman, and Lutz Birnbaumer 431

MOLECULAR BIOLOGY, GENE EXPRESSION, AND DEVELOPMENTAL BIOCHEMISTRY

Increased Levels of Glycine tRNA Associated with Collagen Synthesis
Phoebe S. Leboy, Barbara D. Uschmann, and Doris Lin 558

OXYGENASES, MICROSOMES, AND *P*-450 REACTIONS

Inverse Relationship between Cytochrome *P*-450 Phosphorylation and Complexation with Cytochrome b_5
Ingela Jansson, Paul M. Epstein, Satinder Bains, and John B. Schenkman 441

4-Hydroxy-2,3-*trans*-nonenal Stimulates Microsomal Lipid Peroxidation by Reducing the Glutathione-Dependent Protection
Guido R. M. M. Haenen, Jacintha N. L. Tai Tin Tsoi, Nico P. E. Vermeulen, Henk Timmerman, and Aalt Bast 449

PLANT MOLECULAR BIOLOGY, BIOCHEMISTRY, AND PHOTOSYNTHESIS

Sulfide-Dependent Photosynthetic Electron Flow Coupled to Proton Translocation in Thylakoids of the Cyanobacterium *Oscillatoria limnetica*
Yosepha Shahak, Boaz Arieli, Brian Binder, and Etana Padan 605

PROTEIN STRUCTURE AND FUNCTION

The Stereospecificity of Protein Kinases
Philip N. McFadden, Lillian L. Lou, Kurt Drickamer, and Steven Clarke 227

Structure–Function Relationships in Heparin Cofactor II: Spectral Analysis of Aromatic Residues and Absence of a Role for Sulfhydryl Groups in Thrombin Inhibition *Frank C. Church, James B. Meade, and Charlotte W. Pratt* 331

Rat Brain Hexokinase: Location of the Allosteric Regulatory Site in a Structural Domain at the N-Terminus of the Enzyme
Tracy K. White and John E. Wilson 402

PROTEIN TURNOVER, PROTEOLYSIS, AND POST-TRANSLATIONAL PROCESSING

Biosynthesis of Two Components of Human Acid α-Glucosidase
Akihiko Tsuji and Yoshiyuki Suzuki 234

Enhanced Degradation of Oxidized Glutamine Synthetase *in Vitro* and after Microinjection into Hepatoma Cells *A. Jennifer Rivett and James F. Hare* 423

REGULATION OF METABOLISM AND OF ENZYME ACTION

Inhibition of Cyclic AMP-Dependent Induction of Ornithine Aminotransferase by Simple Carbohydrates in Cultured Hepatocytes
Marsha J. Merrill and Henry C. Pitot 250

Mechanism of Calmodulin Inhibition of cAMP-Dependent Protein Kinase Activation of Phosphorylation Kinase
Daniel E. Cox, Marilyn H. Meinke, and Ronald D. Edstrom 350

Lactate Dehydrogenase in Rat Mitochondria
Richard B. Brandt, Jerome E. Laux, Stephen E. Spainhour, and Edward S. Kline 412

Soluble cAMP-Independent Protein Kinase from Human Spleen
Antonia Gounaris, Theoni T. Trangas, and Chris M. Tsiapalis 473

Metalloproteinases in Endochondral Bone Formation: Appearance of Tissue Inhibitor-Resistant Metalloproteinases
Yuko Mikuni-Takagaki and Yi-Shan Cheng 576

Effect of pH on Tritium Exchange and Hydrogen Production and Uptake in Free-Living Cells and in Bacteroids of *Bradyrhizobium japonicum*
M. Barate, P. Reyes, R. Munilla, V. M. Fernández, A. Ballesteros, and T. Ruiz-Argüeso 639

AUTHOR INDEX FOR VOLUME 259 654

CUMULATIVE AUTHOR INDEX FOR VOLUMES 252–259 656

CUMULATIVE SUBJECT INDEX FOR VOLUMES 252–259 666

Instructions to Authors[1]

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Short Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Short Communications offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors may send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of original figures or good quality glossy prints, to:

Archives of Biochemistry and Biophysics
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Gene sequences should be simultaneously submitted to a gene databank. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Original papers only will be considered. ***Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. It is the responsibility of the corresponding author to obtain the agreement of all the coauthors of the manuscript prior to its submission to the journal.*** Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Communications offer a means of early publication of work of such importance that rapid release is warranted. Normally they should not exceed 15 manuscript pages in length (including text, bibliography, tables, and figures). The review and printing of such papers will be expedited to provide earliest possible publication.

Form of Manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted. See the back cover for the listing of the Subject Areas.

---

[1] An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet: footnotes to tables should be identified by superscript lowercase italic letters (^{a,b}, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and no larger than 8.5 × 11 in. Letters and numbers should be at least $^{3}/_{16}$ in. (4 mm) in height (Leroy lettering size 200). Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1985. Please note the following examples.

1. Gunter, T. E., and Jensen, B. D. (1986) *Arch. Biochem. Biophys.* **248,** 289–304.
2. Bovey, F. A., and Jelinsky, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) *in* Methods in Enzymology (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
